Lesson 01 Demo 03
Setting Up Google Colab Notebook

Objective: To set up a Google Colab notebook for writing and executing Python code in a cloud-based environment
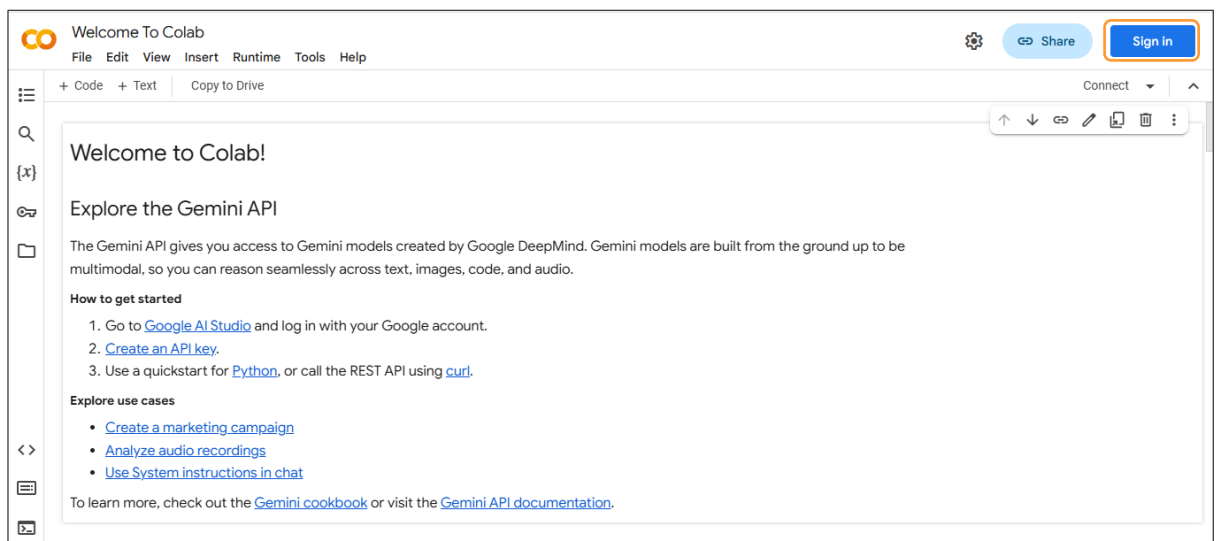

Tools required: None

Prerequisites: None

Steps to be followed:
1. Sign in to Google Colab and set up a notebook

Step 1: Google Colab sign-in and setup

1.1 Open the following link and click on **Sign in**: https://colab.research.google.com/

**Note:** Google Colab requires no installation as it is an online code editor notebook.

1.2 Enter your Google login credentials and click **Next**

1.3 Click on **+ New notebook**

1.4 A notebook named **Untitled1.ipynb** will open. Within the cell, you can write your Python scripts.

Note: Whenever you open a notebook, remember to click on **Connect** to establish a connection between the notebook and the server.

By following these steps, you have successfully set up a Google Colab notebook to write and execute Python code seamlessly in the cloud.
